Predator OS

### Polymorphic Security Platform

It was developed since 2021 by Hossein Seilani, who is also the developer of Emperor-OS Linux. Predator-OS is a free and open-source community project, emphasizing freedom. The distribution is designed for Penetration testing, Ethical hacking, privacy, hardening, and secure, anonymized Linux. Predator Linux is based on Debian Stable, with kernel 6.6.15. Fully customized Plasma desktop with a specialized menu of tools.

Predator Linux comes with approximately 1200 pre-installed tools in 40 different categories and 9 modes. These tools have been sourced from both Debian repositories, and GitHub pages. Most kernel and user configurations are customized by default to prevent hacking attempts and non-privileged access and reduce the attack surface. Additionally, numerous built-in firewalls and defensive tools enable end-users to have control over the Predator-OS. Predator also supports various privacy, anonymization, and security tools, and can be run as a live CD or from a USB Drive, as well as in installation mode.
